

## INDONESIA – Emission and Releases (Article 7):

Thank you Co-Facilitator,

We would like to add our voice to the need to seek clarification and clarity concerning the definition of emissions and releases.

Regarding the listing, on para (1) d, the technology to address nano-plastic, we believe that is not yet attainable for many countries. It is best to use a particular reference to “microplastics”.

Furthermore, we are of the view that the distinct national circumstances of each party, should be taken into everyone consideration in drafting this instrument. Therefore, for para 2, we propose to reflect this point of view as below:

*“Each party shall take into account, ~~as appropriate~~, relevant international rules, standards, and guidelines, in accordance with their national circumstances and capabilities, as well as relevant national regulation, as appropriate”.*
