| [25/04/2024]   | II   | 7. Extended producer responsibility (EPR) | - First of all, we would like to thank you for your extensive efforts in streamlining the text.  
- We view EPR as one of the beneficial tools that support the management of plastic waste. However, developing countries that face challenges due to the limitations of the relevant infrastructure would not achieve the intended benefits of EPR.  
- We think that one size fits all is not always the right approach and therefore we suggest that countries know what works best for them based on their national circumstances.  
- Also, we would like to highlight the point that EPR would increase the price of plastic products and as a result pose stress on the supply of food aid, especially in countries that facing food security matters.  
- Therefore, would support option 0. |
