| II             | 8.   | Emissions and releases of plastic throughout its life cycle | • We second Saudi Arabia's proposal speaking on behalf of the GCC.  
• We support option 3 and suggest that each Party, subject to its national plan and based upon national circumstances and capabilities and relevant national environmental regulations, should take necessary measures to regulate the leakage and release of plastics, including microplastics, to the environment.  
• Also, Parties are encouraged to promote scientific and technical innovation to prevent and capture the release of plastics waste, including microplastics, into the marine environment. |
