Thank you, Dear co facilitator,

We consider that the text should outline the general principles and framework of the design rules.

It should set a framework for the Parties to prevent adopting differentiated rules in order to facilitate international trade.

Further details and design rules should be worked out by the Parties according to these general principles.

In addition, we believe that a further clarification is needed regarding preparation of guidelines, technical and financial support in defining design and performance criteria and harmonization of the standards especially in developing countries.

After the details of the mentioned issues clearly inserted into the annexes, we would like to work on the whole content once again.

Thank you.
