Plastic Pollution Fee

Financing Para 9

We believe that implementation of this paragraph would be challenging since countries have varying administrative and constitutional frameworks for taxes and duties. Implementing a new fee structure can be administratively complex. Exploring other policy instruments like extended producer responsibility schemes or deposit-refund systems could be more effective and flexible approaches.

Additionally, paragraph 4 includes a provision stating that the plastic pollution fee will be transferred to the financial mechanism. However, implementing this would require numerous legal modifications and regulations. Therefore, Türkiye supports OP9 Alt.

We are not in favour of OP9 bis.

For OP9 ter we think that it can be moved to EPR related section of the text.
