Paras 1:

National action plans (NAPs) should constitute mandatory operational elements of the instrument. These plans should establish a robust basis for monitoring and evaluating the agreement’s implementation. Furthermore, NAPs should facilitate the development and implementation of a comprehensive global plastic stocktake i.e. a comprehensive quantification of existing global plastic. To achieve this, the instrument should define appropriate mechanisms for the creation of NAPs within the context of established guidelines and modalities.

NAPs should be simple but comprehensive. Finding the right balance between simplicity and comprehensiveness is crucial for NAPs to be effective.

Türkiye does not support inclusion of a non-exhaustive list consists of elements from the core obligations which are being negotiated and not yet determined.

Additionally, the inclusion of NAP content as a list within the core instrument text could potentially impede the future evolution of these plans considering scientific or administrative advancements.

Therefore, to ensure flexibility and facilitate adaptation to changing circumstances, the content and format of NAPs may be outlined in a dedicated annex to the agreement i.e. annex G, if deemed necessary.

Türkiye also supports the OP1 Alt3 as a starting point.

We believe that all parties should develop National Action Plans but there should be flexibility in accordance with national circumstances and capabilities.

Türkiye supports the following:

OP2 Alt, Para 3 original, Para 5 original, OP6 Alt, OP7 bis alt.
