OBJECTIVE

We support streamlined option 1.

Chile believes that the main objective of the Agreement is to end plastic pollution, including the marine environment, to protect human health and the environment from its adverse effects and to achieve sustainable development.

Ending plastic pollution should be based on a comprehensive approach that addresses the full lifecycle of plastic, through actions through the prevention, progressive reduction and elimination of plastic pollution.

Chile does not support the need of further specifying on other aquatic and terrestrial ecosystems, as the objective is to address plastic pollution, from all sources, in all its dimensions. Chile does not support the inclusion of the reference to “additional plastic pollution”, term that does not appear in res 5/14.
