Declaración de la República de Panamá
INC-4 Ottawa de 23 al 29 de abril de 2024
Group 1 - Subgroup 1.2 Part II: 1 Primary Plastic Polymers

Thank you madam co-facilitator,

As a developing country committed to sustainable development and environmental protection, Panama acknowledges the importance to address the impacts of plastic pollution. On that note, Panama welcomes the streamline text and support option 1 sub-option 1 as a basis of negotiation. Recognizing the importance of evidence-based measures, the production and supply of primary plastic polymers should not exceed reduction targets specified in international agreements. Reducing primary plastic polymers production will result in less plastic waste sent to landfills and reduce plastic leakages into the environment.

Panama is committed to collaborate with other nations to manage, reduce, and optimize global production and supply of primary plastic polymers, in alignment with national development goals and environmental priorities.

Thanks...
