Part II.13 – Transparency, tracking, monitoring and labelling

Comment: This provision requires significant funds (financing of product labeling, development of standards), as well as within the existing interactions there are already certain requirements for these provisions, for example, within the Eurasian Economic Commission, which requires additional discussions between the countries that are members of this union, as well as the tools for implementation are not clear (for example, on how tracking will be conducted and will be tracked each product or batch of products). In this regard, Kazakhstan requests clarification on these issues before making a decision on this part.
