Submission by Samoa, on behalf of the small island developing states at the Fourth Session of the Intergovernmental Negotiating Committee (INC) to develop an international legally binding instrument on plastic pollution, including in the marine environment

Part 11

12. Just Transition

1. Explanatory text

   Generally, we support OP1 alt, noting that Parties should have the flexibility to determine Just Transition needs based on their national circumstances. Small Islands Developing States supports the inclusion of text on indigenous peoples and local communities. We are flexible on placement and look forward to working with others on this. We additionally would like to propose an insertion just before the end of the chapeau after jurisdiction to add “provided that means of implementation are available for developing countries”.

2. Proposed text/edits

   Proposed to insert before the end of the chapeau after jurisdiction to add, “provided that means of implementation are available for developing countries”.
