

Sri Lanka supports Article 12: Capacity Building, Technical Assistance and Technology Transfer, Including International Cooperation

SL emphasizes the need for equitable access to capacity building, technical assistance, and technology transfer, especially for scaling up waste management systems, monitoring, and sustainable alternatives.

International cooperation, technology transfer, and financial support are essential to address these gaps and ensure effective treaty implementation

Sri Lanka also calls for dedicated training programs on Extended Producer Responsibility (EPR) implementation and for increased access to research grants that support innovation in plastic alternatives, circular economy solutions, and pollution prevention.
