Thailand reflection on the Part II.5
Product design, composition and performance
26 April 2024

Part II

5. Product design, composition and performance

As proposing on the way forward of CG1 about the restructuring of Part II, Thailand would like to reiterate that part II.5 should be moved to the beginning of Part II as an upstream measure.

Part II.5a option 1 should be used as the basis of the discussion, taking into account identified elements in universal criteria/specific requirements of products or applications (without limiting their innovation) as well as drawing the direction or roadmap how to include those criteria/requirements/specifications in the intersessional work agenda.

The related provision of Part II.5, II.1, II.2, II.7, II.8, and II.9 are interlinked so they should be considered together in streamlining; while considering Part II.5b, option 2 should be used as a basis of discussion with related target determination.

For Part II.5c, the recycle content should be discussed together with Part II.7 EPR and II.9 Waste Management because of their connections.

As same with other distinguished delegations, Part II.6 provision could be merged with Part II.5d.
