Part II

13. Transparency, tracking, monitoring and labelling

Thailand is of the view that having this provision in place is a valuable complementary to other provisions of this instrument. We support the option 1 as the basis of discussion. In order to strengthen the transparency and accountability in implementing this instrument, the establishment of tracking and monitoring system, and also data platform at all levels is very important. Also, the issue of product labelling and marking is in the area of global harmonization with leveraging the mutual recognition that should be built. However, the technical and financial assistances are needed to support Parties that are in need to fully comply with this provision.
