Brazil is considering the text proposed in the Zero Draft, but proposes that “from the sources identified in Annex E” is replaced by “from sources that should be nationally determined”.

Brazil would also like to propose the addition of the following words by the end of paragraph 1 (a):

“(…) and in workplaces throughout the value chain of plastics”.

On paragraph 5, Brazil would like to propose the following insertions, indicated in capital letters.

The cooperation mechanism referred to is part of a proposal being presented in Contact Group II:

“Parties ARE ENCOURAGED TO promote scientific and technical innovation, INCLUDING THROUGH THE COOPERATION MECHANISM* REFERRED TO IN [part III, article number yet to be defined], to prevent and capture the releases of plastics and plastic products, including microplastics, into the ENVIRONMENT, INCLUDING THE marine environment.”

Brazil is also considering the issue of national monitoring of emissions and releases and will bring a proposal on our next meeting.
