Thank you Mr. Co-Facilitator for giving us the floor,

We would like to express our sincere gratitude to the co-facilitators and the secretariat for helping advance our deliberations, as well as the comprehensive presentation to guide us in discussing the intersessional work.

This intersessional work is important in order to progress the pending discussion and to promote better common understanding about the issue toward the fruitful desired outcome for the INC4.

Indonesia is of the view that after hearing various proposals of topics to be discussed during the intersessional work by the delegates, it’s quite obvious that the topics are quite technical, are related to national circumstances, and would benefit from an appropriate representation of members.

In this regard, Indonesia wants to reaffirm our previous intervention that intersessional should be conducted **inclusively**, with the participation of all members and the involvement of related stakeholders.
Mr. Co-Facilitator,

To add our voice into the discussions, there are several issues that we view should be prioritized for the intersessional, including:

- Definition, and Criteria for identifying chemicals and polymers of concern; as well as Criteria for problematic and avoidable plastic products, short-lived and single-use plastic products, impacts of bans, and work on lists and annexes → these issues are important considering it would determine the core element of this instrument.

- Furthermore, we would also discuss Financial mechanism, including identifying the resources, modalities, and resource mobilization → as have been comprehensively discussed in CG-2, financial mechanism is crucial in achieving the objectives of the instrument by the developing countries.

- And several other areas that might be of importance, in which we will be submitting a more comprehensive list of topics with the rationale to the Secretariat

In addition, noting the presentations delivered by the Secretariat, we would like to express that we are in preference to have an Open Ended Working Group for the intersessional. However, we are also open to different modalities and as may be proposed by members while still considering the inclusivity of the meetings.

Thank you.
