Capacity, building, technical assistance and technology transfer

Mauritius fully aligns with the Africa Group position and AOSIS position.

We firmly believe that Capacity building, technical assistance and technology transfer are fundamental to the Internationally legally binding Instrument. Capacity building must also include obligations to share information, technical knowledge, know-how, expertise and skills, and utilization of the STEPs in developing and maintaining human resources and infrastructure in developing countries, in particular to SIDS, to effectively respond to the plastics problem.

Moreover, we also believe that the Instrument must ensure equal access to up-to-date environmentally sound technologies to all developing countries, in particular SIDS, on a non-discriminatory basis to address plastic pollution, including through safe and sustainable alternatives and non-plastic substitutes.
